

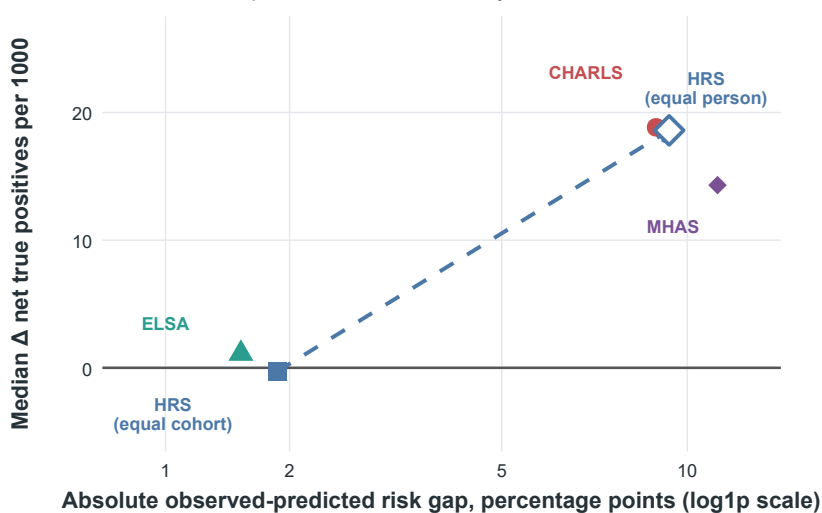

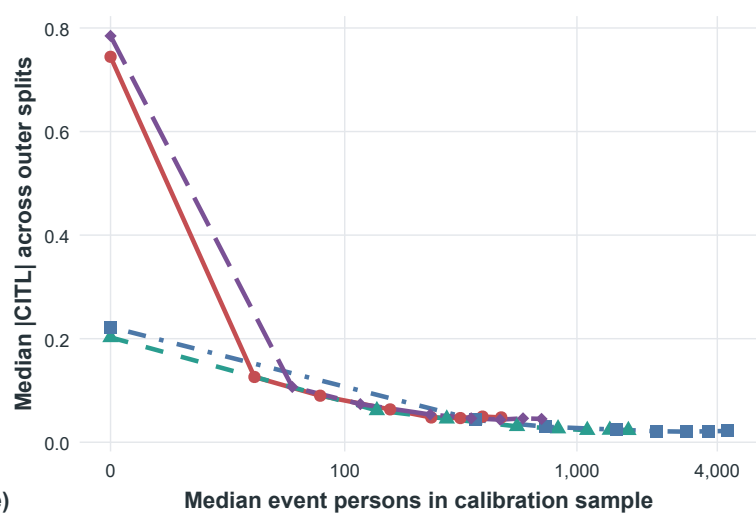

Figure 8. Updating performance across target information and development weighting

A Same target, different development weighting

Dashed arrow: post-result HRS sensitivity; illustrative 20% threshold.

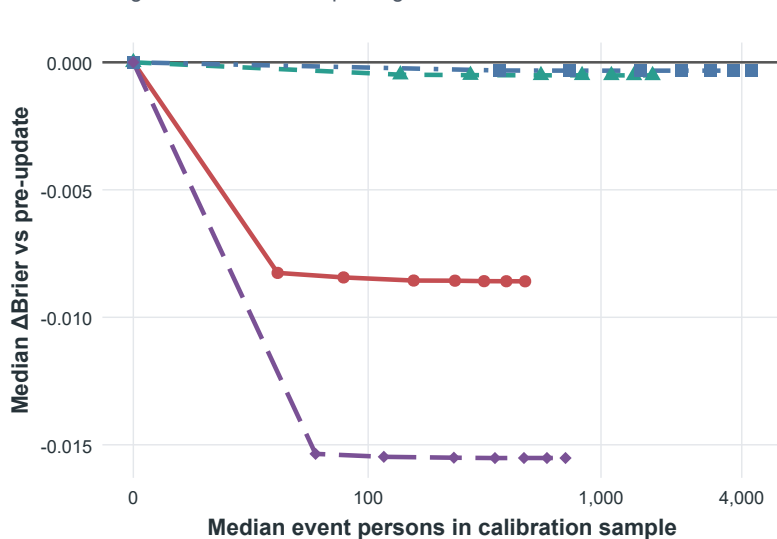

B Calibration vs target event information

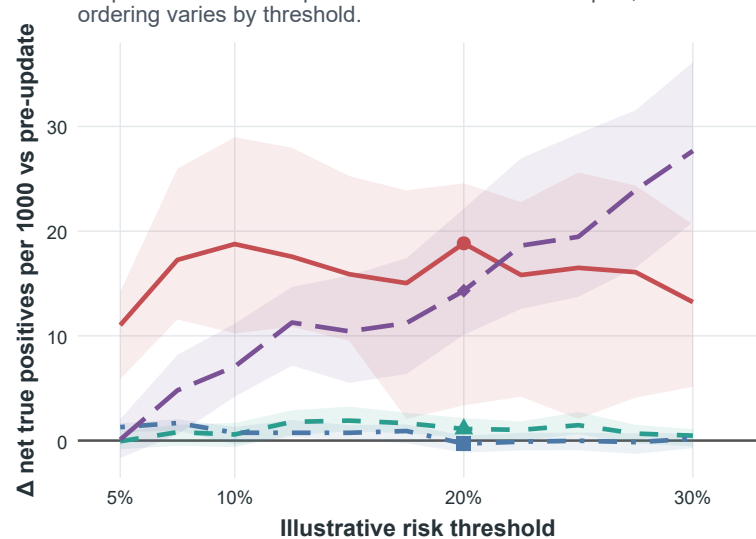

C Change in Brier score

Negative values favor updating.

D Equal-cohort decision-curve increments

Empirical 2.5th-97.5th percentiles across 30 outer splits; ordering varies by threshold.

Target CHARLS ELSA HRS MHAS
